

## STRONG PARTNERSHIP INITIATIVE FOR THE WOODWORKING TRADE AT THE KLEIBERIT BOOTH AT LIGNA 2025

### Young Carpentry Professionals Train for International Championships with the Support of Future Partner KLEIBERIT

As seen at the last LIGNA in 2023, participants of the international professional championships for carpenters and joiners will once again conduct their preparation in a dedicated, professional workshop. Performing under the watchful eyes of an expert audience presents a unique challenge. Germany's carpenters and joiners have long been part of the world's elite, earning numerous medals over the decades. But what is a woodworking professional without expert knowledge of adhesive technology across a wide range of materials, machinery, and applications? This is precisely why KLEIBERIT, a leading specialist in adhesive manufacturing and a long-standing partner of the industry, has maintained a strong, forward-looking partnership with the German Carpentry and Joinery Association (TSD) for many years.

Looking at the visitor demographics of LIGNA, it's clear that the event attracts a highly interested and knowledgeable audience. Among the attendees are thousands of businesses from sectors such as interior construction, window, door, and staircase manufacturing, timber construction, and assembly services. Notably, many young professionals from woodworking vocational schools and industry-related training centers also attend. This was particularly evident during LIGNA 2023, when the KLEIBERIT training workshop drew significant interest, including from many international visitors eager to learn about the world of woodworking specialists. To support the training workshop, the TSD Association and Deutsche Messe AG will launch communication and marketing initiatives.

Ahead of the event, World Skills participants will receive application-technical, chemical, and hands on training at the KLEIBERIT Technology Center in Weingarten / Germany. The company's developers and technicians place particular emphasis on occupational safety and environmental protection when working with chemical materials. Sustainable adhesive solutions are becoming increasingly important, not only for craftsmanship but especially in the industrial-scale production of furniture and construction components. For more information, visit the KLEIBERIT booth at LIGNA 2025.
